

Prompt Library

The ten highest-demand AI tasks — ready-to-use prompts for freelance and AI service work.

How to use this library

Each of the ten tasks below gives you a ready-to-use prompt, not a generic instruction. Copy the prompt, replace anything in [brackets] with your own details, and paste it into any capable AI assistant. The "usage tip" and "common mistake" notes come from how these prompts actually get used in practice — read them before your first attempt, not after a bad result.

These prompts help you produce work faster and more consistently. They do not guarantee income, clients, or specific results — the outcome still depends on your judgment, your market, and the quality of your review before you send anything to a client.

Contents

1. Turning a vague client brief into a clear project scope
2. Writing a first-draft client proposal from rough notes
3. Drafting outreach messages personalized to a specific prospect
4. Summarizing a long client call or document into action items
5. Rewriting a weak draft in a specified tone of voice
6. Generating a week of social media captions from one topic
7. Turning raw notes into a structured blog post outline
8. Writing a polite but firm scope-change / price-increase message
9. Creating a simple FAQ from a product description
10. Drafting a client-facing project update email

TASK 01 Turning a vague client brief into a clear project scope

WHAT IT ACCOMPLISHES

Converts an unclear, informal client request into a structured scope statement you can quote against.

WHEN TO USE IT

Right after a client first describes what they want and before you name a price.

READY-TO-USE PROMPT

You are helping me turn a vague client request into a clear project scope.

Here is what the client said, in their own words:

"[PASTE CLIENT'S REQUEST OR MESSAGE HERE]"

Produce a scope statement with these sections:

1. Deliverable – exactly what will be produced, in concrete terms.
2. Inputs needed from the client before I can start.
3. Revision rounds included (suggest a reasonable default).
4. Explicitly out of scope – list 2-4 things a client might assume are included but aren't.
5. Three clarifying questions I should ask the client before quoting a price.

Keep it concise and in plain language, not legal wording.

REQUIRED INPUTS / PLACEHOLDERS

The client's original request or message, pasted in as-is.

EXPECTED OUTPUT

A five-section scope statement plus three clarifying questions, in plain language.

USAGE TIP

Send the clarifying questions to the client BEFORE quoting a price — answers often change the scope significantly.

COMMON MISTAKE TO AVOID

Quoting a price based on the AI's scope guess without confirming it with the client first.

TASK 02 Writing a first-draft client proposal from rough notes

WHAT IT ACCOMPLISHES

Turns scattered notes about a project into a structured, readable proposal draft.

WHEN TO USE IT

After you've scoped a project and need a written proposal to send.

READY-TO-USE PROMPT

Write a short, professional project proposal from these notes:

Client/business: [NAME OR BRIEF DESCRIPTION]

What they need: [ROUGH NOTES ON THE PROJECT]

My price: [AMOUNT AND CURRENCY]

Timeline: [DEADLINE OR DURATION]

Revisions included: [NUMBER]

Structure the proposal as: a one-paragraph summary, a bulleted "what's included" list, a bulleted "not included" list, price and payment terms, and timeline. Keep the tone confident and plain – no filler phrases, no exaggerated claims about results.

REQUIRED INPUTS / PLACEHOLDERS

Client name/context, rough project notes, your price, timeline, revision count.

EXPECTED OUTPUT

A structured proposal draft with summary, inclusions, exclusions, price, and timeline.

USAGE TIP

Always read the draft aloud once before sending — AI-written proposals often need 1-2 sentences trimmed to sound like you.

COMMON MISTAKE TO AVOID

Sending the first draft unedited — generic phrasing in a proposal reads as impersonal to the client.

TASK 03 Drafting outreach messages personalized to a specific prospect

WHAT IT ACCOMPLISHES

Produces a short, specific outreach message based on real details about one prospect, not a mass template.

WHEN TO USE IT

Before contacting a new prospect you've already researched a little.

READY-TO-USE PROMPT

Write a short outreach message (under 90 words) to a potential client, based on these specifics:

Their business/role: [WHAT THEY DO]

Something specific I noticed about them: [SPECIFIC DETAIL – a post, a product, a recent change]

What I can help with: [YOUR SERVICE, SPECIFIC TO THEIR SITUATION]

My ask: [E.G. A SHORT CALL, A REPLY, A SAMPLE]

Requirements: sound like a real person, not a template. No "Dear Sir/Madam", no exaggerated claims, no fake familiarity. Reference the specific detail naturally in the first line. End with one clear, low-pressure next step.

REQUIRED INPUTS / PLACEHOLDERS

A real, specific detail about the prospect — not generic info you could know about anyone in their industry.

EXPECTED OUTPUT

A short, specific outreach message under 90 words with one clear next step.

USAGE TIP

If you don't have a genuinely specific detail about the prospect yet, go find one before running this prompt — it's what separates this from spam.

COMMON MISTAKE TO AVOID

Reusing the exact same output for multiple prospects by only swapping the name — the personalization detail has to actually change each time.

TASK 04 Summarizing a long client call or document into action items

WHAT IT ACCOMPLISHES

Extracts clear, assignable action items from a long transcript, call recording note, or document.

WHEN TO USE IT

Right after a client call or when you receive a long document you need to act on quickly.

READY-TO-USE PROMPT

Summarize the following into action items. Group the output into three sections: "Decisions made", "Action items for me" (with an implied owner of me), and "Open questions for the client". Keep each bullet to one sentence.

Content to summarize:
[PASTE CALL NOTES, TRANSCRIPT, OR DOCUMENT TEXT HERE]

REQUIRED INPUTS / PLACEHOLDERS

Raw call notes, a transcript, or a long document's text.

EXPECTED OUTPUT

Three short bulleted lists: decisions made, your action items, open questions for the client.

USAGE TIP

Paste the rawest version of your notes you have — the AI is better at structuring messy input than you might expect.

COMMON MISTAKE TO AVOID

Treating the summary as a record of what was actually agreed without checking it against your own memory of the call — AI summaries can miss or misweight a point.

TASK 05 Rewriting a weak draft in a specified tone of voice

WHAT IT ACCOMPLISHES

Takes an existing rough draft and rewrites it to match a specific, named tone — without changing the facts.

WHEN TO USE IT

When you have the right content but the wrong voice for the audience or client brand.

READY-TO-USE PROMPT

Rewrite the following text so it reads in a [TONE, E.G. "warm but professional" / "confident and concise" / "friendly and casual"] tone. Keep every fact and claim exactly the same – do not add, remove, or exaggerate any information. Keep roughly the same length.

Original text:
[PASTE ORIGINAL DRAFT HERE]

REQUIRED INPUTS / PLACEHOLDERS

The original draft text and a specific tone description (not just "better").

EXPECTED OUTPUT

A rewritten version in the specified tone, same facts, similar length.

USAGE TIP

Name the tone with an example reference if you can ("like how [brand] writes") — specific tone descriptions outperform vague ones like "professional".

COMMON MISTAKE TO AVOID

Letting the rewrite quietly add claims that weren't in the original — always diff-check facts, not just vibe, before sending.

TASK 06

Generating a week of social media captions from one topic

WHAT IT ACCOMPLISHES

Produces a batch of varied, platform-appropriate captions from a single topic or product, so you're not starting from zero each day.

WHEN TO USE IT

When planning a week of content for a client or your own business.

READY-TO-USE PROMPT

Generate 7 social media captions for [PLATFORM, E.G. INSTAGRAM] about this topic: [TOPIC / PRODUCT / ANNOUNCEMENT].

Brand voice: [DESCRIBE IN 3-5 WORDS, E.G. "playful, direct, no jargon"]
Each caption should: be a different angle on the topic (don't repeat the same hook), stay under [WORD/CHARACTER LIMIT], and end with a simple, specific call to action — not a generic "check it out!".

Present them as a numbered list, one caption per number.

REQUIRED INPUTS / PLACEHOLDERS

The topic/product, the platform, a short brand voice description, and a length limit.

EXPECTED OUTPUT

7 numbered captions, each a different angle, each with a specific call to action.

USAGE TIP

Ask for 'a different angle' explicitly — without it, most models default to minor rewordings of the same caption.

COMMON MISTAKE TO AVOID

Posting all 7 without checking for repeated phrasing across captions — skim for phrase reuse before scheduling.

TASK 07 Turning raw notes into a structured blog post outline

WHAT IT ACCOMPLISHES

Converts scattered research notes or bullet points into a logical blog post outline ready to draft from.

WHEN TO USE IT

Before writing a blog post, when you have research but no structure yet.

READY-TO-USE PROMPT

Turn these raw notes into a blog post outline. Produce: a working title, a one-sentence summary of the main point, and 4-6 section headings each with 2-3 sub-bullets of what that section should cover. Do not write full paragraphs — outline only.

Target reader: [WHO IS THIS FOR]

Raw notes:

[PASTE YOUR NOTES, BULLET POINTS, OR RESEARCH HERE]

REQUIRED INPUTS / PLACEHOLDERS

Your raw research notes or bullet points, and a one-line description of the target reader.

EXPECTED OUTPUT

A title, one-sentence thesis, and 4-6 headed sections with sub-bullets — no full prose.

USAGE TIP

Specify the target reader explicitly — the same notes produce a very different outline for beginners vs. experts.

COMMON MISTAKE TO AVOID

Asking the AI to write the full post directly from notes instead of outlining first — skipping the outline step usually produces a worse, more generic final post.

TASK 08 Writing a polite but firm scope-change / price-increase message

WHAT IT ACCOMPLISHES

Drafts a message that handles a scope change or added work without sounding apologetic or confrontational.

WHEN TO USE IT

When a client asks for something beyond what was originally agreed.

READY-TO-USE PROMPT

Write a short, polite but firm message to a client about a scope change. Context:

Original agreed scope: [WHAT WAS ORIGINALLY AGREED]

What the client is now asking for: [THE NEW/ADDITIONAL REQUEST]

How this affects price/timeline: [E.G. "adds █X" or "adds N days"]

The message should: acknowledge the request without apologizing for having a boundary, state plainly that it's outside the original scope, state the specific additional cost or time impact, and offer to proceed once they confirm. Keep it under 80 words.

REQUIRED INPUTS / PLACEHOLDERS

The original agreed scope, the new request, and the specific cost/timeline impact.

EXPECTED OUTPUT

An under-80-word message stating the scope boundary, the impact, and a clear next step.

USAGE TIP

Always include a specific number (cost or days) rather than a vague "this will cost more" — specifics reduce back-and-forth.

COMMON MISTAKE TO AVOID

Sending a message that explains the change but never actually states a number — clients will ask, so give it upfront.

TASK 09 Creating a simple FAQ from a product description

WHAT IT ACCOMPLISHES

Generates a practical FAQ section by anticipating real buyer questions from a product or service description.

WHEN TO USE IT

When building a product page, proposal, or sales message that needs to pre-answer objections.

READY-TO-USE PROMPT

Based on this product/service description, write 6 FAQ entries that address the questions a real buyer would actually have before purchasing — not generic questions. Include at least one question about price/value, one about delivery/timeline, and one about what happens if they're not satisfied.

Product/service description:

[PASTE DESCRIPTION HERE]

Format: Q: ... / A: ... (answers should be 1-3 sentences, specific, no vague marketing language).

REQUIRED INPUTS / PLACEHOLDERS

A description of the product or service, including price and delivery details if available.

EXPECTED OUTPUT

6 Q&A; pairs covering price/value, delivery, and satisfaction, in specific plain language.

USAGE TIP

Feed it your actual price and delivery terms, not placeholders — vague inputs produce vague, unusable FAQ answers.

COMMON MISTAKE TO AVOID

Leaving in an AI-generated satisfaction/refund answer without checking it matches your real policy — this is the one FAQ entry clients actually act on.

TASK 10 Drafting a client-facing project update email

WHAT IT ACCOMPLISHES

Produces a short, clear status update that keeps a client informed without over-explaining or under-explaining.

WHEN TO USE IT

At a regular check-in point during an ongoing project.

READY-TO-USE PROMPT

Write a short project status update email to a client. Structure: one line on overall status, a short bulleted list of what's been completed, a short bulleted list of what's next, and anything I need FROM them to keep moving (or state clearly if there's nothing needed).

What's been completed: [LIST]

What's next: [LIST]

What I need from them (if anything): [LIST OR "nothing right now"]

Current status in one word (on track / slightly delayed / blocked): [STATUS]

Keep the whole email under 120 words. No filler opening like "I hope this finds you well" — get straight to the update.

REQUIRED INPUTS / PLACEHOLDERS

Completed items, upcoming items, anything needed from the client, and a one-word status.

EXPECTED OUTPUT

A sub-120-word status update with completed items, next steps, and any client action needed.

USAGE TIP

If the status is 'slightly delayed' or 'blocked', say so plainly in the first line — clients lose trust faster from a status email that buries bad news than from the delay itself.

COMMON MISTAKE TO AVOID

Sending a vague 'things are going well!' update with no specifics — specific bullet points are what make a client feel informed rather than managed.

These prompts are starting points to adapt to your own voice, client, and tools. They do not guarantee any particular outcome, income, or client result — always review AI-generated output before sending it to a client.
